

The problem of your RV Starter battery going dead while sitting for a week or two can be solved in many ways:

- 1) Use jumper cables from your car to start RV when it goes dead. (what a pain)
- 2) Keep a battery charger on your starter battery. Not a bad solution, but: a) you need 110 volts at all times and b) it could overcharge the battery)
- 3) Run your engine periodically to charge the battery. (works but..... don't forget)
- 4) Disconnect the starter battery cable. (works but can be a real pain to do. Also, if disconnected for a long time, the battery may still go dead)
- 5) **BEST SOLUTION:** Install a product called "Ultra Trik-L-Start"

ULTRA TRIK-L-START

- No more running your engine every few weeks just to keep the starting battery charged, no more removing batteries at the end of every season, and no more replacing dead batteries every year. **Trik-L-Start's** unique DC-powered design "steals" power from your house battery charger.
- The new 5-Amp **Ultra Trik-L-Start™** version is ideal for both diesel or gasoline engines. A unique circuit design automatically tapers the charge current down to a small trickle as soon as your starting battery reaches a full state of charge, so there's no danger of overcharge or "boiling" the battery dry.
- **Ultra Trik-L-Start™** is internally protected against short circuits, reverse polarity and overcurrent, making it virtually indestructible.

FEATURES:

- •Fully automatic operation _Install it and forget it
- •Gentle, tapered charge rate prevents over/undercharging, minimizes water loss
- •Unique design "steals" power from your house battery charger - No AC wiring or extension cords required
- •Safer than conventional trickle chargers - No AC shock or fire hazards
- •Also works with solar panels or windchargers - Ideal for areas where AC power isn't available
- •Automatic shutoff - Won't run down your house batteries
- •Installs in seconds, or can be permanently wired in - Never needs to be disconnected
- •LED indicators show charging status at-a-glance...no more guesswork!
- •Built-in Schottky blocking diode prevents reverse discharge
- •Rugged, weatherproof epoxy-encapsulated enclosure
- •Includes hardware, battery clips, illustrated instructions - Nothing else to buy

EASY 3-WIRE HOOKUP

Attaches in seconds with battery clips (included), or can be permanently connected with ring terminals (also included)
